

I am a PhD candidate in programming languages and deep learning at the University of Edinburgh. My project focuses on **optimizing compilation techniques** that benefit from functional intermediate representation (IR) with **deep neural networks** (DL) and **GPUs** as a case study. I also worked on this topic as a research intern at *Microsoft Research Cambridge*.

My other interests include **software/hardware codesign** for DL: while interning at *ARM Research Cambridge*, I worked on a compiler that generates **FPGA** designs in the Spatial HLS language for LSTM networks.

EDUCATION

PhD in Compilers and Programming Languages, University of Edinburgh 2017–2022

Supervisor: CHRISTOPHE DUBACH. Co-supervisors: MICHEL STEUWER, MICHAEL O'BOYLE, KENNETH HEAFIELD.

Project title: *Optimising Compilation of Machine Learning Models for Heterogeneous Hardware*

I am extending the Scala-based compiler Lift to achieve performance portability for DL across GPU architectures. The functional IR adds a universal level of abstraction between the applications and the hardware; the optimal implementation is found by exploring the design space created by rewrite rules.

MSc(R) in Computer Science, University of Edinburgh (sup.: CHRISTOPHE DUBACH) 2016–2017

Thesis title: *Optimisation of CNNs Using A Functional Data-Parallel Language*

MSc in Artificial Intelligence, University of Edinburgh (sup.: CHRISTOPHE DUBACH) 2015–2016

Thesis title: *Expressing Artificial Neural Networks In A Functional Data-Parallel Language For GPU Acceleration*

BEng in Computer Science (with a year in industry), University of York (sup.: SIMON O'KEEFE) 2011–2015

Thesis title: *Memory in Simulated Swarms*
